TC SERIES

The ITALGRU TC box boom type offshore crane series is available with either a diesel-hydraulic or electro-hydraulic drive system. The modular design allows the cranes to be equipped with a machinery house on the rear side of it or alternatively a compact version is available where the crane's prime mover is situated within the interior of the slewing column.

The diesel-hydraulic versions use a stand-alone power source that runs independent from the rig or FPSO and serve as the ideal solution to provide reliable and trouble-free operations on unmanned platforms or installations that require autonomous crane operation.

The main characteristics of the TC type cranes are:

- Compact design based on modular systems with or without house machine
- ITALGRU electronic type crane management system
- Power output regulator to avoid power pack overloading and to ensure excellent operating efficiency
- Closed hydraulic system
- Auxiliary winch
- Man Riding application, GOP and others

Box Boom Crane Type TC 500 EH - CNR - Olowi Field
